

National Electronics NL904 Nixie Tube Pinout

These Nixie tubes are of an "upside down" construction, where the pins are uppermost for correct viewing. They have the full 0 - 9 digits, but no decimal point. There are 13 pins in total, including two commoned anodes, the 10 cathodes and a special "primer" electrode which is apparently used to keep the glow discharge active in multiplexed situations. The tube pinout is as follows, **viewed from the base**:
